Chapter 1

Introduction

just a few introduction of the project: what we have to do

Chapter 2

Vision

whats the vision of the company

Chapter 3

Goals

The acquisitions of foreign banks represent new opportunities for the company to expand and improve their services, and sideways to create a better working internal structure. (focus on value) The IT department plays a strategic role, in ensuring that business services remain reliable, secure and efficient during the transformation and retrieving information about the current state of art (start where you are). In order to reach the business objective and concretize the bank's vision, the IT department has adopted a structure (start where you are) as 'Shared Service Center'. This means that IT is no longer considered only a technical support function, but covers a proactive service, providing standardized services and ensuring the high-quality, cost effectiveness of them, across all business divisions.

The main goal of IT is to implement a 'Performance-Based Management' approach. With this model organizational performance is continuously monitored through measurable KPIs, which serve as pillars to base decisions. (progress iteratively with feedback) Decisions based on objective data retrieved, rather than subjective evaluations, allows management to identify weaknesses, measure progress and compare it to the strategic objective and continuously improve service quality.

In order to achieve the goals defined, the bank has identified three Critical Success Factors (CSFs) that represent key areas required to succeed and to put attention and to enforce.

- the first CSF is the 'Customer Partnership', since the bank wants to achieve its goal and cooperate with independent financial advisors for example. (collaborate and promote visibility) In order to create a customer partnership, IT Department aims to collaborate with respective business units (like relationship management) thus to involve customers closely to the services provided by the bank itself, thus to individualize through feedback and surveys the customer needs.

- second CSF is 'Process Factory', since the bank intends to standardize IT processes, technologies and operational procedures across all the acquired organizations and various departments. Standardization reduces complexity, minimizes operational waste, simplifies maintenance activities and improves service consistency. Overall represents a value to the bank giving it a clear workflow of the processes. (keep it simple and practical) This objective is fundamental for the company since the bank operates across multiple countries and must integrate different IT environments while maintaining regulatory compliance and service quality

- third CSF is 'continuous improvement', the bank recognizes that high-quality services require continuous measurements and optimization. Analyzing the data collected (link before) continuous service improvement, one of the core principles of ITIL, enables the organization to reduce operational costs, improve customer satisfaction, optimize resource utilization and support strategic decision-making based on reliable data. And allows through small steps to proceed and increase the values of the companies, by proceeding with feedback thus to optimize services and resources provided to the customers. -> Think and work

holistically

To evaluate whether these Critical Success Factors are being achieved, the bank has defined a KPI tree composed of six KPI:

Together, these KPIs provide a balanced view of service quality, operational efficiency, customer satisfaction and financial performance. By monitoring (optimize and automate) these indicators on a regular basis, the IT department can verify that its activities remain aligned with the overall business strategy and can identify areas where corrective actions or improvement initiatives are required —> keep momentum going and service level management

Basically consent to answer to the questions ‘Where we are?’ and ‘Did we get there?’ of the SVS principles. In fact these principles should serve as a framework to identify the goals and strategic plan

- what's the vision? answered before - where do we want to be:: make the list - how we get there? - take actions - did we get there? - keep the momentum going —> continuous improvement

Chapter 4

Customer Partnerships

4.1 Time To Market

Time To Market $\rightarrow$ S

4.2 Performance To Contract

PerformanceToContract $\rightarrow$ A

Chapter 5

Process Factory

5.1 Standardization

- Standardization -> A

5.2 Waste

- Waste -> S

Chapter 6

Continuous Improvement

6.1 Service Costs

- Service Costs $\rightarrow$ S

6.2 Backlog

- Backlog $\rightarrow$ A

Chapter 7

Conclusions

whats the impact of our work for the company
